

Reading Group: Perception, Learning and Visual Intelligence (12 hours)

The course focuses on developing fundamental skills, including the ability to read and understand research papers effectively. It encourages critical thinking and analytical skills. Additionally, it aims to improve your ability to present scientific content in English, helping you gain confidence in discussing complex topics with peers. You will also learn about and discuss recent advancements in Computer Vision and Machine Learning, staying updated with the latest research and trends in your field.

Lectures Format:

Teachers will select papers to be presented from top conferences and journals in this field to maximize audience interest and will guide the discussion. Students are required to read a paper in the classroom and discuss it during the lectures.

Exam:

To pass the exam you need to attend at least 80% of the lectures.

To Sum Up:

- We will discuss Machine Learning and Computer Vision papers;
- Be critical;
- Have questions!
